

Knox Technical Center – Nursing Programs

Two Step Tuberculosis (TB) Screening Form

Name:	Program:
-------	----------

Students enrolling in a KTC Nursing Program are required to submit a current tuberculosis (TB) test (Two-step, Annual One-step, Quantiferon, or T-Spot). A chest x-ray is only accepted for documented history of positive TB Test.

Two-Step: If a student has never received a 2-step TB skin test, or if it has been longer than 12 months since their last test, a new 2-step TB skin test will be required. After getting the first shot, it is read in two days. If the result is negative, the second shot is administered seven to ten days later, and it is read after two days. This two-step process may take 14 days to complete.

Annual One-Step: If a student is currently working as a healthcare provider and has participated in annual TB testing, the TB requirement would be met by providing **both** of the following:

1. The most recent annual result (completed within one year of the enrollment deadline).
2. Previous year TB test results (completed within one year of the most recent).

Blood tests: Blood tests such as Quantiferon QFT-Plus or T-SPOT® are also used to detect TB infection and are acceptable.

Copies of the TB test results must be received prior to the enrollment deadline.

TB Skin Test: 5Tu/0.1 ml administered intradermally
